

The Ultimate Fusion of Gravimetric Blenders and Feeders

Maguire Fusion introduces a ground-breaking integration of WSB Gravimetric Blenders and MGF Gravimetric Feeders that sets a new standard in precision and flexibility for the plastics processing industry.

Maguire Fusion combines the extensive capabilities of the world's largest range of Gravimetric Blenders with the versatility and flexibility of Maguire's proven range of MGF Gravimetric Feeders.

With MGF gravimetric feeders positioned beneath or remote to a blender. This enables colors and additives to be dosed direct at the process, and the blender focus on dosing and mixing prime materials

The Perfect Blend of Simplicity and Control:

Seamless Control

Manage and set parameters effortlessly from a single touchscreen control, providing operators with a user-friendly interface for optimal control.

Install how you want

Position a blender and feeder according to your production preferences, providing you the best choice for your process.

Color / Additive Precision

Achieve total precision in color and additive control ensuring comprehensive total recipe management.

Regrind Compensation

Maguire Fusion automatically compensates for changes in regrind and natural dosing, ensuring consistent processing, and minimising color usage.

ULTIMATE
VERSATILITY
AND
FLEXIBILITY

5 YEAR
WARRANTY

Expandability

Easily incorporate additional materials into the processing workflow, providing a simple solution for the integration of new components.

Rapid Color Changes

Maximise fast color and additive changes, minimizing downtime - boost overall operational efficiency.

Mix Optimisation

Maguire Fusion minimizes the risks of de-mixing in color and additive processes, ensuring a homogenous blend for high-quality

Comprehensive Materials Data

Access total materials data for enhanced tracking and reporting capabilities.
